DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of Group I, claims 1-10 and 20-24 in the reply filed on September 02, 2005 is acknowledged.. The traversal is on the ground(s) that the independent Claim 1 (Group I) is directed to "a method of generating a deep N-well pattern for an integrated circuit design," and independent Claim 11 (Group II) is directed to "a computer-readable medium comprising computer-executable instructions stored therein for performing a method of generating a deep N-well pattern for an integrated circuit design." Both claims are directed toward a common invention, "a method of generating a deep N-well pattern for an integrated circuit design.". Hence, it is respectfully requested that the restriction requirement be withdrawn and that Group I and Group II are not distinct. This is not found persuasive because Group I, claims 1-10 and 20-24, drawn to a method of making product was determined in Election/Restriction and a search in class 438 subclass 289 would be required and Group II, claims 11-19, drawn to design verification, classified in class 716 subclass 5.

The requirement is still deemed proper and is therefore made FINAL

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Claims 1-10 and 20-24, d drawn to a method of making product, classified in class 438 subclass 289.

This application contains claims directed to the following patentably distinct species of the claimed invention: claims 1-5 and 8 are one species and claims 6-7, 9-10 and 20-24 are another species.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
